O_{ur} **SIXTY-FIFTH GREETING** **to Garden and Flower Lovers**

Today is our birthday, we are so happy for what we have accomplished that we want you, who made it possible, to be happy with us. This year we are sixty-five years old, and we

think it only fitting and right, in this Sixty-fifth Anniversary catalogue edition to show our appreciation, to you who have been buying our products, in some special anniversary offer.

HERE IS WHAT WE HAVE PLANNED

With each dollar's worth of Bulbs, Plants or Seeds ordered from our 1933 Anniversary Catalogue we will include, *absolutely free*, an extra 15c worth of any variety of plants, bulbs or flower seeds you may select from our Catalogue. For example: If your order amounts to \$2.00, select 30c worth of plants or seeds extra; with a \$5.00 order 75c worth extra, and so on.

Act now—take advantage of this 15% extra value. Look through the catalogue carefully, select both the plants and flower seeds you want this season, and mail your order at once. You will find it both pleasant and convenient to order seeds and plants by mail from Vestal

—the largest and oldest mail order florist and nursery in the South—and be assured of getting quality plants and tested seeds.

In presenting you with this copy of Vestals 1933 Guide, we hope sincerely that it will help you in planning and planting and caring for your garden. We hope, too, that like thousands of others, you will value it most of all as a part of the service it represents. For there is behind that service the accumulated experience of 65 years and an unbroken record, almost three quarters of a century long, of uncompromising integrity and dependability in the marketing of Seeds, Plants and Bulbs.

LOWER PRICES

This past year has been one of the most remarkable in the history of the nursery business for the production of fine nursery stock. At least it has been so in Little Rock, where we have had an abundance of rain at desired intervals and hot weather during the growing months—two essential factors. We are thus enabled to offer the best stock of plants that we have ever grown and at prices in keeping with the times. Such attractive prices have not been offered for many years

and may never again be available. May we call your attention to our Special Offers on pages 39-40-41-42. Our old customers know of the high quality of our Roses, Plants and Seeds, low prices and quick service. Our many new customers each year are likewise delighted.

In anticipation of you sending us your order early, we promise you our prompt and most careful attention to it.

Sincerely yours,

JOS. W. VESTAL & SON

Vestal's Everblooming Climbing Roses

Climbing Columbia

We have had so many letters asking for a list of monthly blooming Climbing Roses that we have decided to divide our climbers into everblooming and annual blooming varieties. The so-called monthly or everblooming Climbing Rose does not bloom continuously like the bush varieties, but with proper pruning can be made to bloom sparingly through the Summer and again in the Fall with a crop of blossoms almost equal to the Spring crop. In most instances the Fall blooms are larger and finer than those produced in the Spring.

CLIMBING RUTH VESTAL A strong and vigorous grower and true everbloomer. Pure snow-white buds, and flowers are of the largest size and perfect form. Exceedingly fragrant. Price, 20c each; two-year-old plants, 75c each.

CLIMBING COLUMBIA A remarkable new rose introduced by us. Like the great "Columbia" in all desirable features, with the added attraction of being a wonderful climber. Grows ten to fifteen feet in one season. The giant flowers are of glowing pink, deliciously fragrant. Each, 20 cents; two-year, 75 cents.

CLIMBING BRIARCLIFF A very fine rose. Here we have an exact counterpart of that popular variety, except that it is a vigorous climber. Lovely pink blossoms. 1-year plants, 20c; 2-year plants, 75c.

CLIMBING MRS. AARON WARD A climbing sport of this well known yellow variety. Vigorous and free blooming. Flowers identical with the bush variety. 1-year plants, 20c; 2-year plants, 75c.

CLIMBING WOOTTON This bright red climbing Rose is one of the best of its color. It is a strong grower and free bloomer, a Rose, in fact, that will give excellent results in growth and flowers. 1-year plants, 20c; 2-year, 75c.

REINE MARIE HENRIETTE A strong growing and climbing rose, making a grand pillar rose in the South. Flowers full and well-formed; rich, brilliant crimson. A grand rose and a fine companion to Marechal Niel. Try it. Price, 20c each; 2-year plants, 75c each.

CLIMBING CECILE BRUNNER A climbing form of the popular Baby Pink or "Sweet-heart" Rose. It makes a handsome miniature Rose, coming in sprays of three to five buds. Color blush, shaded light salmon-pink. Very strong grower. 1-year plants, only 25 cents.

CLIMBING RAPTURE The exact counterpart of Rapture except it is a vigorous climber, and one destined to become a favorite for outdoor planting. Bright pink, apricot and gold. 1-year plants, 20c; 2-year, 75c.

CLIMBING RED RADIANCE Large, globular, cupped blooms, of strong, clear red, with no trace of any other color. An exceptionally vigorous grower, sending forth heavy canes, with healthy foliage. Very liberal in producing blooms, it cannot be surpassed as a red climbing rose. Price, 1-year, 25c; 2-year, 75c.

CLIMBING SUNBURST A climbing sport of that peer of yellow roses, Sunburst—the much-sought new French rose. A true pillar rose of strong growth, bearing freely; very large cadmium yellow flowers, beautiful either in bud or open flower. One-year-old plants, 20 cents; two-year-old plants, 75 cents.

MARECHAL NIEL "The Famous Rose." The fame of the superb yellow rose Marechal Niel, with its large, deep golden-yellow flowers, is world wide. It is almost universally held to be the finest rose for indoors or outdoors, where the climate admits of its cultivation. Its magnificent golden-yellow flowers are almost massive in dimensions, and reports from growers tell of single plants showing one to two thousand blooms at a time. It is of strong growth and beautiful foliage. Price, 20c each; stronger plants, 50c; two-year-old plants, \$1.00.

CLIMBING PREMIER The blooms are immense; buds long, full and pointed. Color rich, deep rose-pink. Growth is very vigorous. Price, one-year, 20 cents; two-year, 75 cents.

Hardy (Annual Blooming) Varieties of Climbing Roses

Emily Gray

Your yard or garden may be too small to warrant the outlay of space sufficient to express your appreciation of roses in bush form. Hardy climbing types need only a foothold; the long canes will twine and cling to any little trellis assistance and spread charming clusters over yards of wall space, and will hang in festoons along the eaves of your porch roof. One thing we want to impress upon you, and that is that continuous bloom in a rose is not its only merit. We do not expect our other floral treasures to be with us all the time. We of the South value our Bougainvilleas, Crepe Myrtles, Magnolias, Poinsettias and Cape Jasmynes, when they come, but we do not insist that they must bloom for us twelve months in the year. So it is with the hardy Climbing Roses. One full blooming season for such a rose as Paul's Scarlet Climber is equal in beauty, for this one period, all the care and attention it requires the rest of the year, and with lots of other hardy climbing varieties.

Polyantha Roses

POLYANTHAS are truly everblooming Roses, scarcely ever out of flower during the whole growing season. They are ordinarily dwarf, bushy plants, seldom more than 18 inches high, hardy as the Hybrid Teas, and bear small flowers in enormous, many-flowered clusters. The class is variable and many sorts do not conform to the type; some are taller, some are rather tender, and a few produce large flowers. They are especially valuable for massing, edging and to some extent for mingling with other flowers.

One-year-old plants, 20c each, \$1.50 per dozen; two-year-old plants, 55c each, \$5.00 per dozen

BABY DOLL This delightful little "sweetheart" rose is an ever-blooming Polyantha. The color is absolutely new, and quite startling in its brilliancy—golden-yellow tipped with clear, bright cerise. The little buds and blooms are perfect in form, elegantly finished and borne in small panicles or singly.

CATHERINE ZEIMET (White Baby Rambler.) This is surely a beauty. It grows to a height of 15 to 20 inches and produces double, pure white flowers in wonderful abundance. It has a fragrance similar to Hyacinths. Of free-compact growth and very attractive, a sheet of white, and always in bloom.

CLOTILDE SOUPERT Known the world over as one of the very best of all bedding roses. A strong, dwarf grower and a truly wonderful bloomer, producing cluster after cluster of the finest formed flowers. Full and double, and deliciously sweet. Color effect is beautiful ivory-white, shading toward the center to silvery-rose.

ELLEN POULSEN Dark, brilliant pink; large, full, sweet-scented, vigorous bushy habit; most floriferous; very fine.

EDITH CAVELL This Baby Rambler is an ideal rose for massing, bedding or for pot culture. The flowers, which are produced in huge clusters, are bright crimson; white eye; very beautiful.

GEO. ELGER A superb Polyantha Rose with just sufficient of Tea Rose blood to make it different from any in its class. It produces great quantities of lovely little buds of golden yellow, opening into miniature symmetrical roses. Each bush is so loaded with blooms that they resemble a huge bouquet. Like all roses of this class, it is free in growth and bloom, blooming all summer. Hardy everywhere with some protection. Foliage bright, attractive green. Excellent companion for the Baby Ramblers.

GLORIA MUNDI This new dwarf Polyantha Rose has created a sensation wherever it has been shown. Honors have been showered upon it in the form of gold medals and silver cups in Europe and this country. The color is a glowing orange and does not bleach. The flowers are double, borne in clusters with rich dark green foliage. It is excellent as a cut flower and cannot be equaled for bedding.

GOLDEN SALMON A new distinctive Polyantha Rose with a brilliant golden orange-scarlet color. Free flowering; growth vigorous and bushy. Very much admired by everyone who has seen it growing at our greenhouses.

GRUS AN AACHEN Golden-rose with shadings of red; beautifully formed, well-filled flowers, splendid for massing.

IDEAL A striking new Baby Rambler of the usual type as to shape, size and other class characteristics; but notable in its phenomenal quantity of bloom, and in the richness of its color. Ideal is darker than the others, its distinctive color shade being a rich garnet red. Ideal indeed for edging or for making a brilliant bed of rich, lustrous garnet, blooming continuously all summer and until frost. The flowers are semi-double, come in great heads of thirty or more, and the color is retained remarkably well until they drop. A neat and compact grower. Has everything a Polyantha of this type needs.

LAFAYETTE An entirely new break in the Baby Rambler type, with brilliant cherry-crimson flowers as large as Paul's Scarlet Climber; produced in immense branched trusses (we counted over forty flowers on one branch), free and continuous blooming; a splendid rose either when planted as a single specimen or massed in quantity.

MADemoiselle CECILE BRUNNER This is the popular Baby Pink or "Sweetheart" Rose. It makes a handsome miniature rose, coming in sprays of three to five buds. Color, blush shaded light salmon-pink.

HOW TO GROW ROSES

For more than sixty-five years Vestal & Son have been growing roses for Southern homes and Gardens. Each plant, each bud has received the careful attention which insures sweeter fragrance, more delicate coloring and more perfect shape.

Thousands of garden-lovers throughout the Southland have realized the superiority of Vestal Roses. You will find them gracing nooks and corners around beautiful homes in many states. You will see their rare crimson, pink and yellow tints contrasted against the dark green of Vestal shrubs, lifted above the restrained hues of Vestal's Spring flowers.

With few exceptions, Vestal's Roses are grown on their own roots. Roses of this type are never troubled with wild shoots coming up from the roots which most generally is the case with grafted or budded plants. Every new cane, whether from below or above the ground, will have blossoms of the true variety, so in growing own root roses do not be afraid of the strong vigorous canes that come up from below the ground; for they are from the original plant.

Another advantage of Vestal Roses is that they are shipped with a ball of dirt on the roots. This extra feature enables them to be set out with perfect safety at any time. Our two-year plants are potted in the early fall, plunged in the ground in cold frames outdoors during the winter months where they harden and mature slowly and evenly.

One-year roses are greenhouse grown plants and are not subjected to outside weather conditions until planted. For this reason they should not be planted out of doors in the open, unless given protection, until after severe freezing weather is over.

WHERE TO PLANT The average home grounds can usually furnish several available spaces for rose beds. Choose a place where the sun will shine for at least one-half the day, and, if possible facing to the South or Southeast. Avoid planting too close to trees or hedges as they take the nourishment away from the roses. Select a well drained place, both surface and underground; roses do not like wet feet. Try to combine in your location as many of these conditions as possible, because, while no point is absolute, all are important; but don't give up the prospect of growing roses for the lack of some one of them. If you are earnest in your endeavor you can soon provide the essentials.

SOILS Any soil that will grow vegetables or other crops will grow roses, but they like a rather stiff, clay soil that is at the same time porous. They will also grow in sandy soils to which a portion of clay loam has been added; and likewise, if the soil is too heavy, a little sand may be mixed with it for better drainage. Some soils are too acid for best results for roses and need an application of ground limestone. The application of lime will benefit most soils but will not harm any. Apply at the rate of one pound per square yard of surface. If hydrated lime is used, apply only half as much.

PREPARING THE SOIL Having selected the location and decided upon the size and shape of your beds, you are ready to prepare the soil. The results you obtain in growing roses will depend to a great extent on the thoroughness of this operation. Eighteen inches is not too deep to spade or fork the soil, as the roots of roses often extend even deeper than this in their search for food and moisture. After the soil has been worked up, level with a rake, at the same time pulverizing the soil as much as possible to make all the plant food available.

PLANTING Planting roses is not a serious or complicated job; on the other hand, it is amazingly easy. When ready to plant, remember again that the roots must be kept from the wind and sun. The best plan is to keep the roots covered with a damp piece of burlap or of other packing material. Unwrap each plant just before placing it in the ground. The size of the rose bed may be any width, length, or shape as desired, but in planting the roses allow two and one-half to three feet apart each way for each rose bush. This allows plenty of room for proper development. If only a single row is planted, they may be set two feet apart in the row and still have plenty of room. Make the holes in the bed plenty big enough to accommodate the roots in a natural and uncramped position, neither too

Too deep Too shallow Just right Right & banked
& set wrong For winter

deep nor too shallow (see illustration). If pot-grown roses are being planted, set about one inch deeper than the surface of the pot and do not break the ball of earth that holds the roots. Settle well pulverized soil in around the roots, so as to fill up every air space, and so that every single root will be entirely enclosed in soil. When the hole is half filled, and roots covered, press the soil down firmly with the hands; then fill the hole with water and let it drain away; fill in level with soil, and tamp it carefully but firmly, then give a final covering of soil, which should be about level with the surrounding turf, but not high enough to let the water run away when it rains.

FERTILIZER Closely related to the preparation of the soil is the proper kind of fertilizer to use. Much has been said for and against barn yard manures, but no fertilizer has been found that will give better results in growing roses than half rotted cow manure; and especially when the rose beds are first prepared. A three-inch layer spread on the top of the bed and thoroughly mixed with the soil will give wonderful results. If barnyard manure is not available, any other good commercial fertilizer is the next best. Apply at the rate of two ounces for every plant to be planted. Ground bone meal may be worked in at the time the roses are set or applied any time thereafter. It is slow acting, from which you get results for several months and years afterwards. One pound may be applied to every square yard of bed surface. If possible, all fertilizers, except those used in after years as a food, should be applied several weeks before the roses are planted. Roses require liberal applications of fertilizers, and it is not often that too much manures are used. However, when manures have been applied for a long number of years to the same beds, there is danger of the soil becoming too light, and firing or burning of the roses results.

TIME TO PLANT This depends on the section of the country in which you live. With us in the South and Southwest, roses may be planted any time from the first of October until the first of June, excepting those periods during the colder winter months when the ground is frozen. Pot-grown roses may be planted at any time of the year if water is available to firmly establish them in the ground and allow the new roots to take hold. Autumn and early spring planting of roses, however, is preferred because the roots get established before hot weather.

TREATMENT ON ARRIVAL As soon as you receive the package from the express office or postman, unpack at once and place in a shady place. Do not unwrap the roots until ready to plant. Do not expose roots to the sun or wind. If unable to plant the roses as soon as they arrive, "heel them in" in the garden until you are ready to plant them. If "heeled in," press the soil cover firmly around the roots to keep down evaporation.

CULTIVATION AND WATERING As a general rule, Mother Nature attends to her job of watering the trees and plants, but weather conditions vary and roses need plenty of water as well as sunshine, so it is well to aid Mother Nature by man-made methods, and when dry weather comes, resort to artificial watering. Make a good job of watering your plants. Don't just soak the surface of the ground for an inch or two. Soak the dirt well all the way down below the roots. Late afternoon is the best time to water as evaporation is not so great as it is during the hotter part of the day. As soon as the surface of the bed has dried out enough to allow cultivation, scratch the entire surface about an inch deep and leave in a finely pulverized condition. Frequent cultivations are more beneficial than watering every day. Cultivate at least once a week and oftener if possible, and always as soon after watering or a rain as the soil is in a condition for cultivation. Keep all weeds and grass out of the rose beds and do not plant other flowers in the same bed with roses.

MULCHING This serves to retain the moisture and also to preserve a suitable temperature. A dust mulch is maintained by frequent hoeing and is perhaps the best method, although during the hot months a strawy cow or horse stable manure, that will not heat, is very beneficial. Heat moss may be applied three or four inches all over the rose beds during the summer months. It keeps the soil cooler and stops weed growth. This may be removed in the fall to be followed by a mulch of manure for winter protection and an early spring feed.

WINTER PROTECTION

In the South and Southwest it is not necessary to give roses any winter protection other than a straw mulch. Farther North, however, the tender varieties should be mounded up from 8 to 12 inches with soil around the base of the plants and the tops wrapped with straw and burlap. This is only recommended in sections where the weather is below zero and remains at this temperature for a long period. In warm sections, if the plants are wrapped the covering should be removed as soon as the cold spell is over. If allowed to be covered too long the tops of the plants rot.

PRUNING

A good rule to follow with pruning bush roses is to cut out all dead wood at any time of the year that it is noticed. Uneven growth may also be pruned back at any time of the year without injury. The main pruning in the spring may be done in January, February, or March, depending on the section. With a handsaw and pruning shears, remove all dead wood and other wood that has lost its usefulness to the main plant. Care should be used to keep the plants as symmetrical as possible, at the same time removing all the dead, weak, overcrowded and otherwise useless shoots. New plants should be cut

Method of Pruning Hybrid Teas for Garden Display

back to within six inches of the ground, and older plants one-half to two-thirds of the previous seasons' growth. By thinning out the shoots, more strength is left for the main stalks. If budded or grafted roses have been planted, the gardener should keep a sharp lookout for ground suckers and cut them off before they have time to draw much sap strength from the main root system. In the pruning out of shoots they may be entirely cut away to the base of the plant, or to its starting point on the older shoot, from which it springs. When the plant has been pruned, the shoots should be left as nearly as possible as equal distance from each other, so that the plant presents a well-balanced appearance at all times. Climbing Roses should only be pruned immediately after their blooming period. At this time cut out all dead parts and remove most of the growth that is over two years old. Climbing roses bloom freest on second year growth. Tip back all the present season's growth at least one-third to one-half. The lateral shoots that come from these canes will give the best blossoms next season. Tipping back the long canes on ever-blooming climbing roses causes them to bloom more during the summer and fall.

Novelty Chrysanthemums

Snow White

YELLOW GOLD "Yellow Gold" is one of those globular incurved varieties that are the shipper's delight, and of which it is well nigh impossible to have too many. The color is a clear bright yellow. The foliage is medium in size, permitting fairly close planting. Grows five feet from June planting and blooms November 1st to 15th from terminal bud. Price, 25 cents each.

SNOW-WHITE A fine, very early white commercial. Form, foliage, stem, color make it a very valuable second early; a splendid grower; the round incurved form makes it a perfect shipper. Very unusual in effect, like unpolished marble. Price, 25 cents each.

AMBASSADOR Might well be described as an "Early Turner." Its large size and pure white color suggest that variety, although the bloom is somewhat more compact and the fine stem holds the bloom erect without support. Fully as large, and blooms three weeks earlier, being ready to cut October 15th to 20th. Price, 25 cents each.

CELESTRA Globular, golden yellow; tall from early planting; stem rigid, beautiful foliage; very valuable early. Take bud late (Crown or Terminal bud). Blooming date October 10. 25c each.

OLD ROSE A pleasing shade of deep pink. Pink varieties are not very plentiful, and this is a very welcome addition to the list. Blooms about November 1st. Price, 25c each.

ROSE GLORY Deep rose-pink on opening, changing to a beautiful lighter tone as it matures. A very imposing globular, incurved. Unsurpassed in its type and color; always scarce. Price, 25c each.

One Each of the Twelve Novelty Chrysanthemums for \$2.00

There are many ideas as to what soil is best suited for the Chrysanthemum, but good blooms may be grown on clay or light sandy loam providing the grower is a close observer and considers the condition of the soil in which they are growing. Clay soil, being more retentive of moisture, will require less water and feeding than soil of a more porous nature. The Chrysanthemum is a gross feeder, and, therefore, the fertility of the soil is very important in the production of fine blooms. Experts concede that good rotted cow manure provides the best form of plant food for Chrysanthemums and its use is preferred to all others. Sometimes on account of the scarcity of cow manure, commercial fertilizers must be used. There are plenty of good fertilizers on the market and whichever one is the most available and easiest to obtain may be used to good advantage. Vigoro, sheep manure, cotton seed meal and field fertilizer 4-10-4 may be substituted and used instead of manure. At the time of planting add $\frac{1}{4}$ by volume of manure to the soil for Chrysanthemums, and if commercial fertilizer is used one teacupful will be

sufficient for a plot of ground 6 feet square. After the plants have been set out 8 to 10 weeks, light feedings of manure water or commercial fertilizer dissolved in water is a good food for them and its use will increase the size of the blooms and the health and vigor of the plants.

It is our belief that March and April are the best months to plant Mums. for out of door planting but good results can be expected from plants set out as late as the first of June. If planted too early there is danger of the tender plants being frosted, which is not the case when they are planted from March on.

We take great pride in the reputation of Vestals Chrysanthemums and any one desiring the most up to date kinds will find the varieties described on this page to fulfill every requirement of what a good Chrysanthemum should be. We know you will be delighted with the results you obtain from our plants.

Cultural Directions for Growing Large Flowering Chrysanthemums

WHEN TO PLANT. This depends on the section, but usually any time that the ground can be worked from the first of March up to the first of July.

SOIL. Any soil that will grow other flowers or crops will grow chrysanthemums, preferably a sandy clay loam with a mixture of well-rotted cow manure.

FEEDING. Chrysanthemums are gross feeders but there is no set rule for the amount of fertilizer to use, as this will depend on the richness of the soil in the beginning. Liquid manure water may be applied every three weeks during the growing season up to the time the buds show color. Do not fertilize after the flowers are opening.

TRAINING. A strong outdoor plant can support four strong shoots and produce large blossoms. When the plants are 8 inches high pinch out the tops, and after the new shoots appear select the four strongest to produce the blossoms. Remove all the rest of the shoots except these four. When the shoots have grown enough to need staking, tie them to a stake, but not too tight.

Every 5 or 6 days the plants should be examined, and with the thumb and forefinger remove all the lateral buds that come out at the axil of the leaves, but always leave the main terminal bud undisturbed (see illustration). The object of removing the lateral shoots is to concentrate the whole energy of the plant and thereby increase the size of the flower. In case the main shoot gets broken off, select the next strongest lateral bud just below and carry on as before.

Sometimes chrysanthemum plants that are propagated in the greenhouse early in the Winter, before the plants have had a sufficient rest, will form flower buds in early Spring and Summer. These will in no way effect the blooming qualities of the plants in the Fall. Remove these immature flower buds as soon as noticed, and if they persist in forming, keep on removing them by pinching out the tops until a strong growth shoot appears for the lower part of the plant.

ENEMIES. Green and Black Aphis are the most destructive insect pests, but one or two applications of Nicotine Sulphate applied at the rate of one teaspoonful to a quart of water and sprayed on the plants will completely destroy these insects.

Chrysanthemums are next to Roses in importance. In the South they can be grown any way—in pots or in the yard. They bloom after all other flowers have gone. Our collection embraces the most complete varieties anywhere and are especially selected for this particular section.

BETSY ROSS. This is one of the largest white chrysanthemums on exhibition at fall shows. Flowers of fine form. A pure snow white, a good strong grower; in all, a unique and beautiful variety.

CHIEFTAIN. A beautiful incurving pink of perfect shape. Perhaps the finest incurved pink commercial variety in cultivation today.

ENCHANTRESS. The color is bright rose-pink, of a very even shade.

JOSEPHINE FOLEY. The best white introduced in recent years. Purest white, strong in growth and stem. Early mid-season.

MARIGOLD. A monster yellow; flower unsurpassed both in size and color in its season.

OCTOBER HERALD. An intense yellow with perfect stem and foliage. Shows a bronzy tint from late buds. Easy to manage.

OCTOBER QUEEN. Snowy white, with incurving center and horizontal outer petals. Very promising as an early.

RICHMOND. A new golden yellow; noticeable for its long blooming season, fine form, perfect fullness and silky finish.

ROSE PERFECTION. An early Chieftain, blooming two weeks earlier than that fine pink variety.

SILVER SHEEN. White; fine large blooms on very strong stems; largely grown for its period, which is early mid-season.

YELLOW TOUSET. A brilliant yellow; wonderful in form, with a strong stem. A good keeper and shipper; in fact, one of the best commercial yellow varieties on the market.

WHITE CHIEFTAIN. We are sure that this will prove an ideal white. Like its parent, it holds in fine condition for a long time.

ANEMONE CHRYSANTHEMUMS

The anemone flowers consist of one or more rows of flat or tubular ray florets with shorter quilled or tubular disc florets of the same or a distinct color, and are grown in sprays for artistic floral arrangements. Fine for disbudding. 20c each; set of 4 for 75c.

BLANCHE. One of the largest anemones yet produced; snow white, very perfect in form, large finely rounded cushion, and snowy ray petals.

GOLDEN PHEASANT. The bright yellow anemone flowered may be grown natural to sprays or disbudded, and produce flowers from three to five inches in diameter accordingly. Cushion slightly darker shade than the ray florets. The disc florets which are bent over at the tips and are highly polished form the button-like center, thus giving the appearance of having been hand embroidered with golden

ROSE ROYAL. Another fine anemone and rather distinct in color, being a violet-rose throughout, and matures November 15; disbud; C. S. A. certificate, scoring 94 points.

SUNSHINE. An intense yellow of unusual brightness. Its full beauty is best displayed when disbudded as the flowers are too crowded when grown naturally.

One each of the 4 Anemone Mums for 75 cents

Frequent cultivation is the secret of moisture conservation. When watering becomes a necessity, do not water every day. Water at intervals of once a week or ten days. A thorough soaking twice a week is far more beneficial than a daily sprinkling of the top soil.

Summer Bedding Plants

"Brighten up your lawn and garden. Have beautiful cut flowers for table and yard decorations. Showy foliage plants for beds. Pot plants. Baskets and porch boxes for the porch." Nowhere else in the United States can you enjoy the many beautiful flowers and plants as right here in the South. Plant more of them this year than ever before. Make your back yard a mass of blossoms all through Summer and Fall. You can easily do this by planting Vestal's Full-of-Life pot-grown plants.

QUEEN'S WREATH

ANTIGONON LEPTOPUS (Coral Vine.) (Mexican Rose.) A beautiful climbing plant with tuberous roots; blooms freely from June until fall. Beautiful rosy-pink flowers produced in large racemes. Leaves heart-shaped. A most desirable vine for the South. In this section tops die down in winter; it is, therefore, advisable to protect the roots with a mulching of leaves. Vine does not begin growth until April. Strong two-year roots that will bloom the first year, 35c each, 3 for \$1.00.

ASPIDISTRA

An attractive, large-leaved plant, especially suited for dark halls and rooms, thriving with little light or attention. Especially hardy in the lower South and fine for low foundation work against brick terraces. Plants with 3 or 4 leaves, 50c each.

ACALPHAS

FIRE DRAGON (Acalpha Tri-color.) A most wonderful plant, surpassing the finest Coleus or Begonia in the rich color of the leaves, which are rich and beautiful. Mottled and blotched with crimson and scarlet on a green background. Foliage extra large and maintains its marking regardless of summer heat. Its most important feature is its wonderful qualification for bedding, as it will stand bedding out like Coleus; in fact, in the sunniest place it produces the highest coloring. Price, 10c each, 3 for 25c.

ACHRYANTHUS

Ranks with Coleus as a bedder, but more hardy. Retains its brilliant coloring all the season. Price, 10c each, 12 for 75c.

AGERATUM

Useful in all summer bedding schemes, as well as for baskets and vases. In fact, they are indispensable for these purposes on account of the serious lack of blue shades among bedding plants. They appear to greatest value as an edging or massed in liberal quantities. Price, 10c each, 75c per dozen.

ANTHERICUM

COSMOSUM A pretty variegated plant well adapted for use in hanging baskets, or as an edging for porch or window boxes, with graceful 4 to 6-inch long deep green foliage with a band of creamy yellow through the center. Price, 20c each, 3 for 50c.

ALTERNANTHERAS

OR DWARF COLEUS

Price, 10c each; 60c per dozen; \$4.00 per 100

AUREA NANA It is admirably adapted for ribbon lines, carpet bedding, or massing front lines in foliage beds. It is of compact growth. Color of foliage, bright golden yellow.

BRILLIANTISSIMA Crimson scarlet and pink. Its gorgeous color gives it the name of "Rainbow Plant."

PARYONCHOIODES MAJOR It is the Alternanthera so largely used in all ornamental carpet gardening. It grows only about six inches high, and can be kept much shorter by shearing it. The color is as bright when first planted as at any other time, and this is kept constantly. The color is brightest carmine.

Vestal's Gorgeous Bedding Coleus

The Coleus, a plant very familiar to all, is one which, for bedding purposes, can not be excelled. The foliage is very beautiful in many of the good newer sorts, and shows a great variety of markings and fine combinations. It is used in great quantities in private places, in small gardens and in the public gardens and parks. The Coleus is used to best advantage in planting in ribbons of color in the borders along drives, in beds of various shapes, such as stars, crescents, triangles, circles and squares, as the foliage, being of such various colors, can be used with striking effect. Light colors against dark, with borders of contrasting color, which are easily obtained among the yellow, red, striped, mottled brown, blue-black, plum and other colored sorts, secure effects when used on a fine lawn or in the border, hard to make with other plants.

Vestal's Gorgeous Bedding Coleus—Price, 10c each; 75c doz.; 100 for \$5.00.

NOVELTY COLEUS

NEW GIANT COLEUS Christmas Gem. (Brilliancy, or Dr. Ross.) Leaves immense, 8 to 12 inches long. Looks like a Rex Begonia, and just as beautiful. Cannot be excelled as a pot plant. The name aptly describes the appearance of this variety, which belongs to the giant-leaved section; of strong, vigorous habit, growing from two to three feet high, with leaves often nine to ten inches long, which are of bright carmine, shadowing off to a deep maroon, the margin being yellow and green, the whole leaf having a rich velvety luster. Price, 15c each, 3 for 40c.

C. W. SCHMIDT Improved Setting Sun; center crimson-velvet, edged and spotted gold; very fine for potting in 4 and 5-inch pots; finest offered in the Coleus line. Price, 15c each, 3 for 40c.

Price, 15c each, 3 for 40c.

NEW HARDING COLEUS Harding Coleus, most beautiful, bright red leaves with brown, green-yellow edging. A capricious beauty, varying in expression with each day's development. The tiny clusters of new leaves are bright green with a cheerful carmine segment; the older leaves show a russet background broken up with cream and pink; while

Coleus C. W. Schmidt

others frame a dappled wedge of crimson and maroon, with the most brilliant shades of clear green. Price, 20c each, 3 for 50c.

TRAILING QUEEN A center wedge of creamy pink to crimson, finely scalloped edges. The plant is half trailing or running and is well adapted for window boxes, baskets or vases. Price, 10c each; per dozen, 75c.

THE COMET PLANT

ACALYPHA SANDERII Leaves are dark green, from the axle of each of which springs a long, drooping spike of glowing crimson-scarlet, nearly an inch in diameter and from 18 to 24 inches long, very velvety in texture, reminding one of a long piece of brilliant chenille. Exceedingly curious and interesting novelty; unlike any decorative plant. Bound to have a large sale on account of its oddity and rarity. Price, 30c each, 3 for 80c.

CARNATIONS

Blooming plants value for the inspiring spiciness of their perfume, the perfection of their flower form, fine cutting lengths of stem, freedom, and long keeping. Carnation plants should be repotted whenever there is indication of their becoming pot-bound. Transplanted into the garden after all danger of frost is over, and given at least 12 inches of space, with good soil and cultivation, these plants should furnish abundant bloom from July until late Fall or may be kept "pinched back" to retard bloom, potted up at approach of frost and brought inside for winter blooming.

CHRISTMAS CHEER New. Color is a brilliant glowing Poinsettia scarlet. Easier to grow than a Geranium, and will produce fifty or more blooms in a season. Price, 15c each, 2 for 25c.

The Comet Plant

Mammoth-leaved Rex Begonias are Ideal Box Plants for Shady Porches

Vestal's Choicest Flowering Begonias

REX BEGONIA The Rex division of the Begonia family has been a great favorite. In no other class of plants do we find the rich metallic foliage, lustre and various colors so satisfactorily blended as here. We find colors of bright green, silver colored, reddish bronze, as well as varieties of bright rosy plum color. The plants are grown exclusively for the great beauty of their foliage, as they make unexcelled pot plants. The Rex Begonia dislikes our dry atmosphere and bright sunshine, and thrives best in a rather shady and moist situation. The soil should be as near as possible of the nature of a mixture of loam, sharp sand, and well rotted cow manure. The soil should be light and porous. Price of Rex Begonia, good, strong established plants, 35c each; 3 different varieties for \$1.00.

ARGENTEA GUTTATA It has purple-bronze leaves, oblong, in shape, with silvery markings, and is in every way a most beautiful Begonia. Produces white flowers in bunches on ends of growth stems. 20c each, 3 for 50c.

ALBA PICTA ROSEA This is a seedling of the Alba Picta crossed with Rubra. Foliage rich green, spotted with white; flowers on long, pendant stems, similar to Rubra. Color, delicate rose; very free flowering. 20c each, 3 for 50c.

BEEFSTEAK BEGONIA Sometimes called the "Strawberry Leaf" Geranium; very ornamental; leaves silver top, red underneath; very pretty flowers. Each, 20c, 3 for 50c.

BRILLIANT New Everblooming Flowering Begonia. Freest blooming variety known; of easy culture, low bushy habit, and literally covered the entire year with a wealth of beautiful Christmas red flowers with yellow stamens. It well merits the name of Everblooming Begonia. Price, 20c each, 3 for 50c.

CAROLINE LUCERNE A superb new variety of the Coral Begonia, producing gigantic trusses of bronzy-red flowers and flowering continuously from April to November. The foliage is dotted with silvery white. Blooms last from a month to six weeks, and are borne in immense clusters, almost hiding the plant. The color is bright coral-red, changing to a delicate pink. Nice plants, 30c each, 3 for 75c.

MARGUERITE Leaves a bronzy green, somewhat resembling Metalica, but giving a more bushy form. Light rose colored flowers. 20c each, 3 for 50c.

M. DE LESSEPPS It is beautifully spotted with silver. A very strong, free-growing variety that will succeed with ordinary care. White flowers. 20c each, 3 for 50c.

RED RUBRA This Begonia is still a great favorite. The flowers are a rich coral red, hanging in large pendant clusters; these, combined with the rich green foliage, make it one of the best plants for house culture. 20c each, 3 for 50c.

PINK RUBRA We doubt if there is a pink flowered variety that equals it. The foliage resembles Rubra in shape, but is a lighter green, while the flower panicles are much handsomer. It is a pure pink flowering Begonia. 20c each, 3 for 50c.

THURSTONII A distinct and pretty shrubby variety, with thick, heavy foliage, which is of a rich metallic green above and bright red underneath; the flowers are a fine pink, rising well above foliage, 20c each, 3 for 50c.

The Beefsteak Begonia

ARTILLERY PLANT

PILEA ARBOREA A pretty little plant of drooping, graceful habit and fern-like foliage, literally covered with small, pretty flowers, giving the plants a pleasing effect; fine for basket or pot plants. Price, 10c each, 3 for 25c.

BOUGAINVILLEA

CRIMSON LAKE This is one of the most notable vining plant introductions of years. Its numerous clustered, crinkly, paper-like bells in their emerald setting are an incomparable brilliant crimson-lake color. Their foliage is attractive in form, and shiny; the entire effect of leaf, twiggy growth and luxuriant bloom giving them an air of tropic elegance unequaled by any other indoor vine. Their bright festoons are wonderfully effective along the walls in conservatories and sunrooms, or when trained on wire trellis forms, they can be kept down to dwarf, compact formation for use in tubs or large crocks. Price, one-year plants, 25c each; large plants, 50c.

SANDERIANA Large bell-shaped flowers of lilac-rose, borne profusely in terminal clusters all over the plant; blooms when quite small. 20c each, 3 for 50c.

CROTONS

Nothing can excel the beauty and richness of coloring that is found in this class of plants. They are beautiful as pot plants for the conservatory, making handsome specimens for decorative and exhibition purposes. In the latitude of Little Rock and southward they are wonderfully effective for summer bedding, presenting a glorious medley of rich variegated colors not found in any other class of plants. Three-inch pot plants, 40c, 3 for \$1.

BRUGMANSIA

ANGEL'S TRUMPET It grows easily, blooms freely and the flower is something to be proud of. The Brugmansia blooms indoors in winter and in the garden in summer. The plant has large tropical leaves, with blooms eight inches wide at the mouth, resembling a trumpet, hence the name, "Angel's Trumpet." Pure white in color and as fragrant as a Jasmine. Extra strong plants, 35c each, 3 for \$1.00.

Christmas or Lobster Cactus

GIANT WHITE MOON FLOWER

A decided improvement over the old variety Ipomea Grandiflora. The flowers are more than twice the size of the old variety and are produced in such wonderful profusion that they completely cover the vine with a veil of glistening white. Price, large growing plants, 10c each, 3 for 25c.

Begonia Brilliant

Brugmansia or Angel's Trumpet

Pelargonium Easter Greeting

New Ever-Blooming Pelargonium EASTER GREETING

To this is added, in Easter Greeting, the habit of continuous blooming, which has made the ordinary bedding geranium so highly valued. Easter Greeting is the first of a new race and one of the most valuable introductions in recent years. As an Easter plant it rivals the Azalea; but unlike the Azalea, Easter Greeting will remain in full bloom all summer. Price, 25c each. 3 for 65c.

These are produced on long stems with a freedom not known in other varieties of the Marguerite. Price, young plants, 15c each, 4 for 50c.

New French Hydrangeas

French Hydrangeas
Try a few along the base of your porch.

When given a rich, moist soil, where they are protected from the afternoon sun of summer, and the plants kept well enriched, there is nothing more attractive than a mass of well-developed specimen Hydrangeas. They are also very desirable when grown singly or in tubs. Several varieties vary in color from pale rose to blue. This variation is due to certain chemicals contained in the soil.

SPECIAL NOTE—Blue is a color that is not fixed in Hydrangeas. It is controlled sometimes by climatic, and other times by soil conditions. To make these Hydrangeas bloom blue, incorporate one-half pound of alum, broken into pieces about the size of a hickory-nut, with each bushel of soil.

GENERAL DE VIBRAYE. Dependable pink; very popular.

MAD. CHOUTARD. Pretty bright rose; a fine variety to convert to blue.

E. G. HILL. Reliable early large pink.

PRESIDENT FALLIERES. Very delicate rose.

MAD. AUGUSTA NONIN. Very large early pink.

RADIANT. Large clusters of rosy-amber changing to bright pink. Quite a distinct color and very beautiful.

RED BRAZILIAN PLUME PLANT

(*Justicia Sanguinea*.) The same in every way as the Pink Plume Plant, except that the flowers are a deep cerise pink. Price, 20c each, 3 for 50c.

Fuchsia

Brazilian Plume Plant

PINK BRAZILIAN PLUME PLANT

(*Justicia Carneae*.) This plant is a native of Brazil and of the easiest possible culture, and seems to do equally well in all kinds of soil, and in any situation, requiring very little attention; it is, in fact, one of the few plants that everyone can grow successfully. It is a strong, rapid grower, and throws long shoots, each of which is tipped with the beautiful pink plume-like flowers, the ends of every petal drooping in a most charming manner. This new sort begins to bloom when the plant has only three or four leaves and is never out of flower afterward. If pinched back occasionally it makes a very dwarf stocky plant, frequently covered with 20 to 50 large pink flower-heads, lasting a long time. The foliage is also more persistent and highly ornamental, being heavy in texture and very velvety. Price 20c each, 3 for 50c.

Beautiful Decorative Ferns

Boston Fern

THE BOSTON FERN

This popular fern has proved one of the best decorative plants of recent introduction. The fronds are much larger than the Sword Fern, and do not stand so stiff, but droop gracefully. Excellent for making large specimen plants, also for hanging baskets. Price, nice young plants, 15c, 25c and 50c each.

WHITMANII

(Ostrich Plume Fern.) More of a dwarf habit than the Boston Fern. The fronds are of entirely different nature. Each frond is subdivided on the order of the Compacta Fern, thus producing a very beautiful effect. Its decorative ability is excellent. Price, 15c, 25c and 50c.

NEPHROLEPIS SPLENDIDA

This is the most wonderful fern of them all. It combines the good qualities of the four most popular sorts. It has the grace of a "Boston," the wavy effect of a "Roosevelt," the fluffy effect of an "Ostrich Plume," and the uniqueness of the "Fish Tail." Price, 15c, 25c each; larger, 50c.

NORWOOD FERN

A dwarf, compact form of Whitmanii, carrying its fronds stiff and erect on wiry stems that do not break down. Makes ideal specimens. Called by some florists Fluffy Ruffles Fern. Very showy. Price, 15c, 25c and 50c.

NEPHROLEPIS SPARROWII

The Wonder Vine

PHILODENDRON

"The Wonder Vine"; Also Known as Devil's Ivy

We cannot say too much in praise on the value of this vine for use in fern dishes, wall pockets, baskets or any place where anything else will not thrive. It is by far the best plant for use in the home as under-watering, over-watering or any adverse conditions will little affect it. For fern dishes, plant a sufficient quantity in dish and pin the vine to the soil with greening pins and it will root at every joint and form a compact mass of green heart-shaped leaves. Give it a trial and see for yourself. Everyone knows the value of English Ivy in the home, yet the Philodendron surpasses it by far. Price, 25c each, 3 for 70c.

Both the French and African classes are very effective, the former have the small, velvety flowers, in pretty combination of yellow, brown, maroon and striped effects; the African sorts are the enormous flowered ones, in very showy orange and lemon shades. Both kinds are most popular for beds and borders—French or African. Price, 10c each, 75c per dozen.

They also add to the attractiveness of shrubbery if planted in clumps in the vacant spaces, the varied shades of green and the dazzling scarlet have a most pleasing effect. In the GARDENS OF YESTERYEAR

VESTAL'S ROSES WERE PLANTED

In the long ago, frilled hoop skirts brushed demurely down the fragrant garden paths leading to bowers covered with Vestal roses. The guests at southern plantation homes were invited into the garden, where the gracious hostess went among her blossom-laden bushes, snipping great bouquets of perfect roses. Then, as now, the rarest and most

beautiful varieties bore the name of Vestal's. Then, as now, Vestal Roses graced the gardens of palatial homes and modest cottages. For sixty-five years, southern rose gardens have been proving anew each year that the loving care put into the development of Vestal Roses has helped to keep the rose on her royal throne, the Queen of all the Flowers.

There's ROMANCE in VESTAL'S ROSES

If roses could speak, there would be tales of rare romance breathed out by Vestal Roses. In the days of poke bonnets and young bearded chins, Vestal Roses went a-courting. And now the folded pages of many a cherished old letter press the withered

petals of a Vestal Rose, still faintly fragrant with the ghostly perfume that made romance long ago. For the Vestal Roses that bloom fairer than ever now are the royal descendents of the Vestal Roses that shared the romance of the old South.

VESTAL'S FLOWERS attended Grandmother's Wedding

Happy was the little bride of yesteryear whose friends had a garden full of Vestal's flowers. Bridal bouquet, petals falling from the flower girl's basket, blooming altar and blossomy bower all came from southern gardens. The guests at grandmother's wedding knew them by name—Vestal Roses. And brides in widely separated places still know the magical name that makes garden dreams come true—Vestal Roses.

MAY DAY LAUGHTER and FLOWERS

May Day was a gala day, long, long ago. Around the flower-twined May pole danced the young folks, lads and lassies who already had blushes and sighs and laughing dimples for each other. There was courting and coquetting, and a secret language done with flowers. Red roses and white ones; buds and full-opened blossoms—all had a part in the

May Day romance. The rose tucked in the shining curls of many a maid was later hidden over the heart of a yearning lover. And if the roses were of rare beauty, it probably had its origin in Vestal's famous rose gardens, which then, as now, supplied exacting southern rose lovers.

HOW TO BUILD A POOL

Every home may possess a back yard lily pool—even the rented house. For a simple, beautiful pool may be built of a barrel or a tub. A plain wash tub painted blue inside and sunk to its rim in the soil; half a barrel, a wooden lard tub—all these can be used. A particularly beautiful pool may be really a group of pools, made from three or four sunken tubs, with moisture-loving plants placed in between. But if a "regular pool" is desired—one built of cement—proceed in this manner: Select a sunny spot. Excavate a bowl-like depression to a depth of two and one-half feet, leaving sides at a 45 degree angle. Line the sides and bottom with heavy wide mesh fence wire, supporting it two inches from the ground. Make a cement mixture of one part cement, two parts sand, and three parts gravel. Pour a three-inch layer of this mixture, covering sides and bottom and enclosing wire reinforcing. Put on another three-inch coat immediately and smooth. Let set a few hours; then put on a quarter-inch coat, consisting of one part sand and one part cement gauged with water; trowel down. Keep wet for three days. While the concrete is still moist, add a coping of stone, brick or concrete. On the fourth day, the pool may be planted. The plants may either be placed directly in soil on the bottom of the pool or planted in boxes. If soil is put on the bottom of the pool, let it be at least a foot deep, covered with one inch of clean sand. One-third well-rotted manure and two-thirds rich loam is a good mixture. Plant the lily roots so that the crown is even with the top of the soil. Do not bury the crown. Place at least eight inches of water in the pool above the soil surface.

HOW TO PLANT WATER LILIES

For most pools lilies may be planted in boxes 2 feet square, as shown in diagram. For best results, plant only one lily to each box. Shallow water plants may be set in the same box with lilies to the advantage of both.

The best soil to use is a mixture of three parts good garden soil and one part well-rotted cow manure. Bone meal may also be mixed with the soil, and this is a good fertilizer to feed plants that appear starved out.

Water lilies should be set with the crown of the plant just even with the surface of the soil, which is then covered with one inch of sand to keep the water clean. Allow from 3 to 5 feet between lilies in the pool for proper development.

Eight to twelve inches of water above the crown is best for the production of blossoms. Full sunlight is necessary for the best growth and formation of the blossoms.

Hardy water lilies in the South can be planted any time after the first of February, whenever the weather is not freezing. Tropical lilies should not be planted until all danger of freezing is past. In our section this is usually about the middle of March.

SCAVENGERS

JAPANESE SNAILS Large, trap door, live, bearing, hardy snails that devour the algae and green moss and thus help to keep the water clear. 15c each, 3 for 40c, 12 for \$1.50.

Price, 15c, \$1.50 per dozen.

GAIETY Reddish-orange mottled with carmine and edged with yellow. The tongue is yellow and densely spotted with carmine. Price, 20c each, \$2.00 per dozen.

MRS. WOODROW WILSON Large flowers of soft rose and carmine-pink. A great favorite. Price, 25c each, \$2.50 per dozen.

NOKOMIS Like The President, this is a hybrid of the famous Fire-bird. The foliage is a combination of emerald green and bronze, beautifully veined, making a lovely setting for the large, vivid crimson flowers. These flowers are most attractive, having a rich silky sheen on the petals and the color is darker than that of any other bronze-foliaged Canna. Price, 15c each, \$1.50 per dozen.

QUEEN HELEN, or YELLOW KING HUMBERT A green-leaved sport of the popular King Humbert. A majestic, stately variety, with large massive foliage. It has the same habit of growth and free-flowering qualities, but the flowers are bright yellow and lightly spotted with red. This is the best yellow Canna now on the market. The flowers are of the largest size, heads full and borne well above the foliage. Price, 15c each, \$1.50 per dozen.

RICHARD WALLACE A tall-growing, wide-flowered, heavily-trussed canary yellow, the largest and best of its color; bleaches very little. The longer we grow this variety, the more are we convinced it is the best all around yellow Canna we ever had. Price, 15c each, \$1.50 per dozen.

Rock Gardens

The New Vogue in Gardening

HOW TO MAKE A ROCK GARDEN

Everybody is making rock gardens these days. Even on the small lot there is some place where a tiny rock garden may be tucked away. The compactness of a rock garden is one of its charms. There is no end to the interesting combinations of rocks and plants. Pygmy mountains, Lilliputian valleys can be built of rugged rocks; a trickle of water pretend a mountain torrent, losing itself in a mirrow pool.

LOCATION. A spot in full light and air, away from shade trees, is best. Any slope, too, can be used. Transforming into a rock garden is often the happiest treatment for a slope. Take advantage of any outcrop of natural rock about your grounds.

PLANNING. Make your rock garden a reproduction of nature in miniature. Strive for natural surroundings for rock-loving plants. While there is charm in unusual layouts, orderly arrangements of rocks and planting are most pleasing. Your rock garden may be just a wall, or large enough for ridges, valleys and even bogs. Picture the finished form before starting construction. The plan may be anything fancy dictates, but when possible it should have steps and paths about it. Irregular paths are most interesting, with walks following the valleys.

ROCKS. The best rocks to use are those between the round and boulder type and the flat or flagstone type. Save the latter for walks and steps. Rocks should not all be of the same size; a few large ones add effectiveness. Too many small stones make the effect spotty and unnatural.

SOILS. Usually a prepared soil of equal parts: (1) vegetable fiber; (2) garden loam, free from clay; and (3) sharp, coarse sand is best. Vegetable fiber may be leaf mold, old sod, or turf from the woods if well decayed. In cities it is easy to procure prepared peat fibers. Barnyard manure is too rich and heavy for rock plants.

CONSTRUCTION. Have soil prepared in advance. Excavate or grade existing soil to proper contour. Then lay the rocks, lower ones first. Choose and place rocks so that there is more plant surface than rock in the finished effect. Place them as naturally as possible; long rocks nearly horizontal and parallel to face of the slope. As each rock is laid, ram the soil back, around and beneath it; use no cement. Four factors in the success of rock work are—(1) Place each stone so it is anchored firmly. Stones above help hold those below. (2) Slope horizontal crevices downward into

bank. (3) Rocks up-tilted let rain run down into crevice; tilt back 10 degrees to 45 degrees or more. (4) In walls, set each high rock back of the lower, giving the face of the wall a back-slope, thus giving plants water, air, light and room. Consider direction of ground drainage and lay stones across valleys to prevent soil washing away.

PLANTING. Plant rock plants in the spring. Planting in crevices is best done during construction, but most planting can be done any time after construction. In rock planting the point is to spread roots out, firmly in contact with soil. Some watering may be needed until plants become established. Keep out all weeds.

CHOICE OF PLANTS. To help you choose dependable plants, we list from our stock of hardy perennials those best for rock planting. In making your choice and planting consider height, color, and adaptability of the various plants. Tufted plants, with rosetted foliage and short flower stalk above, such as the Heuchera and Strawberry Geranium (Saxifraga) are best suited for small crevices. Erect, bushy plants such as Aster Mauve Cushion, Saponaria and Sedums are good for flat areas, above creeping sorts. Let drooping plants hang down over face of the rock; they are best near top of the slope. Drooping plants, too, are fine for foliage bulk, for luxuriance, and covering banks. A few of the best drooping types are Alyssum Saxatile, Phlox Subulata, Iberis Sampervirens and Campanula Carpatia.

For creeping plants to form mats on ground and outlining walks, use Veronica Rupestris, various Sedums, and Thyme.

For large rock gardens, dwarf forms of the evergreens, such as the Prostrate Juniper, Cotoneaster Horizontalis and others will make picturesque backgrounds.

Almost all of the smaller flowering shrubs are both suitable and desirable in building up the background or in establishing height at places where needed.

ALLIUM Low-growing bulbous plant, with grass-like leaves. The flowers are borne in globular heads during June and July. The color is a beautiful shade of mauve lilac. Grows in a sunny place. Plant 5 or 6 inches apart. Excellent for rock gardens. 20c each, 3 for 50c.

Attractive dwarf plants that will succeed in any soil, forming evergreen tufts of bright green foliage, from which innumerable flowers appear in dense heads, on stiff, wiry stems, from 9 to 12 inches high. They flower more or less continuously from early spring until late in the fall. Very useful in the rockery and border edgings. 20c each.

Large Double Flowering Peonies

Peonies will grow anywhere—reasonably speaking. They thrive in partial shade, but best results are obtained when they are planted in deep, rich soil about 2 inches below the surface and have a sunny location. Plenty of water during the growing season is an added stimulus, and if liquid manure is applied at intervals of ten days, the grower will be amply repaid for his trouble in the increased size and coloring of the flowers. When placing manure around the plants, care should be taken not to put any on the stems, as this will sometimes cause the plants to cease blooming.

FELIX CROUSSE (8.4) An exceptionally fine Peony and one of the leading red varieties. It is extremely brilliant in color, a vigorous grower, free bloomer, and slightly fragrant. 90c each, 3 for \$2.50.

M. JULES ELIE (9.2) This is by many considered the most beautiful of all Peonies. The flowers are of immense size, globular in form. The color is glistening lilac-pink, shading to deeper rose at the base. The whole flower is overlaid with a sheen of silver. One of the best cut flowers, being a splendid keeper. Price, \$1.25 each, 3 for \$3.25.

EDULIS SUBERBA (7.6) Very soft salmon pink, changing to blush white. Blooms habitually in broad clusters and makes a fine bedder. Price, 75c each, 3 for \$2.00.

BARONESS SCHROEDER (9.0) Rose type; late. Take all around, this is one of the finest Peonies in existence, the whole flower giving the impression of a huge pyramid of baby pink, fading away to purest white. Its immense flowers of great substance with high chalice-shaped center are freely produced, lasting a long time. It is as sweet as the rose with the true June rose fragrance. \$1.00 each, 3 for \$2.50.

MADAME EMILE GALLE (8.5) Rose type; late midseason. Large, double, cup-shaped imbricated flowers; color delicate sea shell pink with touches of heliotrope and lavender. Set the plants in a straight line in the trench one foot apart, about one inch deeper than they originally stood in the nursery row. Firm the earth well about the roots, level off, and then cut the plants back to within four inches of the ground. In the spring, after the plants have made a growth of six or eight inches, cut off one-half of this growth, both sides and top, and proceed in a like manner with each succeeding growth until your hedge has reached the desired height and width. THE NEW YOUNGBERRY

A remarkable new berry which we firmly believe is by far the most promising of all the new things. The berries are about an inch long, dark purple color with a delicious flavor. The plants are very productive and begin bearing the first year after planting. Another characteristic of the Youngberry is its adaptability to all and any kind of soil.

Plants should be set in rows seven feet apart with the plants nine feet apart in the rows. Raise them as you would a Dewberry as to posts and wire if you do not want them on the ground. The Youngberry is a remarkable grower, so fertilize it well. Oftentimes a vine will grow from 15 to 24 feet in one year. Don't prune Youngberries the first year, allow all the wood to mature even if they get 12 to 20 feet long. Put up on trellis or wire. Just prior to picking would advise cutting off all new growth to about a length of 8
